

## Analysis of Assignment 7

File size(bytes)	Write	Fwrite
2	73	196
16	53	162
128	40	343
1024	39	373
8192	39	129
65536	37	80

- Above table describes the times taken to create and write data in 10 files for each size.
- It can be seen that write function takes lesser time than fwrite.
- Also interesting thing is the time taken to write decreases with the increment in file size.
- So if we use write function to write large files, then it would take less time.
